NOVELTIES FOR SPORTSMEN.

GAME LAWS, GUNS, TRAPS AND APPARATUS

A Big Hunting Season Anticipated—New Rules and Methods to Preserve Game—Game Seasons to be Changed—Sportsmen May Cooperate and Breed Game Birds.

"I don't know whether returning prospect has anything to do with the case or not, but it is a matter of general jubilation among sportsmen that the present hunting season promises to be one of the best in many years. From every section of the country comes reports that game, small and big, are met with in satisfying quantities. Moose are so plenty in the northwest that the state authorities of Minnesota have allowed five days of open moose and caribou shooting. Neatly home, woodcock and partridge are reported plentiful, the conditions of the spring and summer having been favorable to their northward migration. Along the coast one hears of the noble promise of the kinds of duck, and on many private preserves the shooting of imported English and Mongolian pheasants will, this season, be followed on a scale never before possible. Altogether the year is widely pronounced an extra good one in the matter of game."

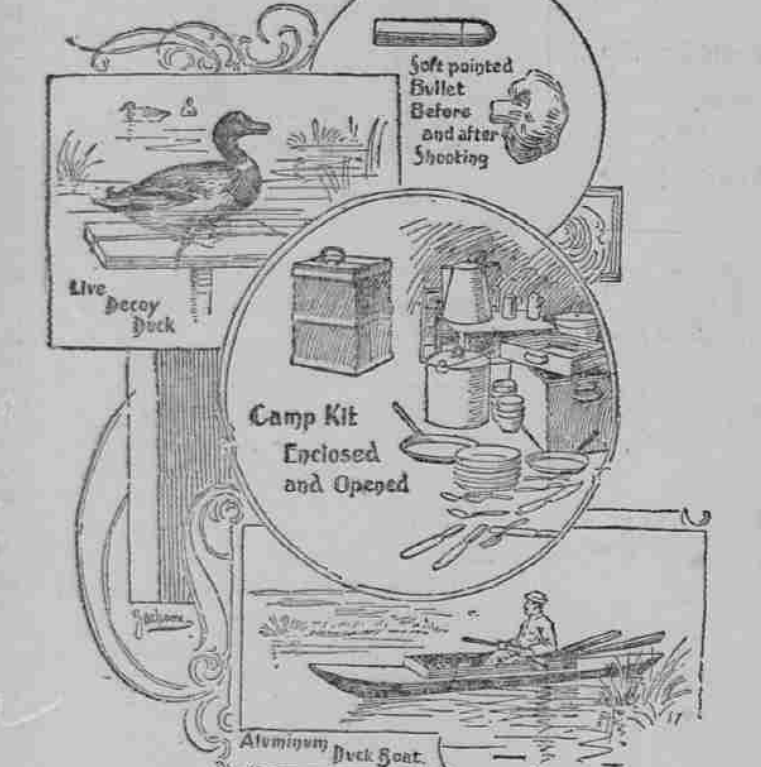

Thus spoke Dr. J. G. Knowlton, well known from the Hudson to the Rio

admirable law which allows only two deer annually to each individual. New York cannot be too highly commended. In New York, too, the pursuit of deer with dogs is prohibited, nor is the hunter allowed to stalk deer by means of dogs, or by hunting them at night in the woods and with lantern light. Such methods, if continued, could not fail to exterminate our deer, as the buffalo has been practically exterminated.

"As regards the breeding and preservation of birds, remarkable improvements have taken place. Formerly our sportsmen had little choice in feathered game. In fact, they were almost limited to ruffed grouse or partridge, quail, woodcock and the different sorts of duck. Now gun clubs all over the country are experimenting and importing from abroad. English and Mongolian pheasants have been brought over in large quantities, and apparently thrive in our climate. The English pheasant is a most desirable game bird, but his raising requires care and considerable discrimination in the matter of food.

QUAIL BY CRAFTSMADE.

Quail, too, are being carried north in great numbers from the southern states, where they swarm. In the matter of duck breeding some wealthy clubs with property along the coast have recently been breeding much time to the duck in its various manifestations. Some very fine ducks have been produced. A mixture of the mallard and black duck has resulted in a type, singular enough to look at, but excellent from the standpoint of the hunter. The great majority of the ducks thus bred are destined for use as live decoys. The first joint of the wings are clipped while they are still fledglings, which effectively prevents them from straying. As decoys they are anchored on

NEW SPORTSMEN'S DEVICES IN AS USED BY SPORTSMEN.

Grande as a crack wing shot and enthusiastic all around gunner. Dr. Knowlton has just returned from a preliminary campaign among the woodcock in Sussex county, New Jersey. The house in New York is filled with trophies of the chase, and looks like a small arsenal so crowded in it with all sorts of firearms. Dr. Knowlton is a better sportsman and a better shot than his predecessor of former generations. In fact, each recurring season greatly benefits the conditions surrounding amateur game shooting. A revolution in game shooting has been taking place during the past few years in the general art of venery, and in particular in that part of it connected with the feeding, care and tending of game. Our game laws are better than ever, and each year sees some new restriction against indiscriminate shooting, or some new legislation for the preservation of old or the impor-

One most notable change is the cheapness of the guns. The weapon which used to cost \$150 and more can be purchased nowadays for from \$25 to \$40. And yet the grade of gun has not by any means deteriorated. As a matter of fact it has improved all along the line. England still beats us with the better quality of gun, but we are turning out better balanced weapons, but in process of time we may produce guns quite as good. As regards rifle and revolver, however, England cannot approach us.

MAGAZINE GUNS AND POWDER.

"The repeating magazine shotgun is everywhere taking the place of the old double-barrel among sportsmen. In regard to powder the revolution has been complete. Black powder is still but obsol-

EFFECT OF SMOKELESS POWDER AS USED THIS SEASON.

tion of new species. Our sportsmen are better because they cheerfully and for the common good submit to these laws. Our guns and cartridges are unquestionably better. Let us take the same laws without which sport might as well be dead. Wise legislation has done wonders, and if the concerted movement now on foot among sportsmen in several states should come to naught, much more will be accomplished. For instance, in New Jersey, just now there is a strong agitation about to shift the opening of the woodcock season from July 1 to Aug. 15.

SOME NEW GAME LAWS.

This has already been done in New York, with the result that the falling supply of woodcock has begun to increase appreciably. Another projected reform, strongly favored, is the abolishment of sports shooting for ducks, geese, etc. A duck season from September to January would be satisfactory enough. But as a rule the marked improvement in our game laws is most encouraging. For instance, the

MOSAIC MAP OF JERUSALEM.

ONCE COMPOSED THE FLOOR OF AN OLD CHURCH.

Positions of the Tower of David, the Golden Gate, Pilate's Palace and the Church of Zion Clearly Outlined.

A map of Jerusalem, in mosaic, over 1,500 years old, has been found at Madaba, in Palestine. It was discovered in uncovering the ruins of an ancient church about to be rebuilt. The entire pavement of the old church was a mosaic map of Palestine, many parts of which had been worn away or broken off. The mosaic is a fine example of the art of the mosaicist, and is a valuable historical document. It shows the city of Jerusalem as it was in the sixth century, and is a valuable aid to the study of the city's history and geography.

OF GREAT HISTORIC VALUE.

After a minute examination of the mosaic, it is pronounced of great historical value, dating from the fourth century of the Christian era, and representing the Jerusalem of Hadrian and Justinian. After comparing it with ancient descriptions of the city, it is found to be a very accurate representation of the city as it was in the sixth century. The mosaic shows the city of Jerusalem as it was in the sixth century, and is a valuable aid to the study of the city's history and geography.

CHURCH AND PILATE'S PALACE.

Passing southward, down the great colonnade (some of the columns are still to be found), a building with a red roof is found. This is the "Martyrium" of Constantine, a great church of that period. Then we see a yellow dome, the church of the "Anastasis." Following the colonnade to the east we find a gate. But there are three other gates around it, leading southward. This is evidently a remnant of the ancient city wall, the "wall of Hadrian." Zion and Siloam can be reached by the gates alone, being beyond the wall. After passing through the gate we are in Zion, and this is made all the more certain by the street which begins at the "gate of Joppa." It has no columns, but is marked in yellow and yellow on the mosaic.
